

Course Analysis for NUMN33 Numerical Methods for Partial Differential Equations, VT 2025

Course Information

Lecturers: Eskil Hansen, Robert Klöfkorn

Teaching assistants: None.

Number of students:

14 newly registered.

2 students answered the course evaluation.

Examination

Projects and oral examination: 11 students passed.

Final grades:

In all, 11 students, have got their final grade.

7 passed with distinction.

4 passed.

Course Evaluation

Summary of student's answers:

See attachment.

Teachers' comments:

The course is organized with lectures twice a week and supplemented with 3 homework projects throughout the course duration. The material presents a good mixture of theoretical background and practical application of Finite Element methods for elliptic partial differential equations.

Attendance during the lectures was very good, and the percentage of students finishing the project was satisfying.

Changes from the previous course realisation:

It was the first time the course was given.

Suggestions for the next course realisation:

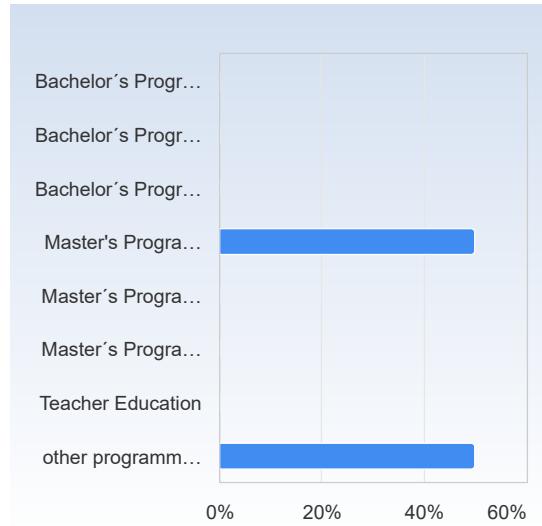

In the next realisation we try to give earlier feedback for the projects so that improvements can be included in the ongoing projects.

NUMN33VT25 Numerical Methods for Partial Differential Equations

2	0 (0.0%)
3	1 (50.0%)
4	1 (50.0%)
5	0 (0.0%)
Total	2 (100.0%)

	Mean	Standard Deviation
As a result of this course, I feel confident about tackling unfamiliar problems.	3.5	0.7

What did you appreciate most with the course?

What did you appreciate most with the course?
The course was well balanced with theory and coding part. The workload was distributed very well.
Projects were fun and designed to cover the course reasonably completely

What do you think should be improved?

What do you think should be improved?
It would be useful to have a seminar / q&a where we can ask some questions if we get stuck in some codes or if we have some doubts about the theory.
Theory sections quickly went into too much detail. Being too specific without holding the student's hand w.r.t the big picture. Example - for which problems do we prove uniqueness, why not for other problems? We learn about quite specific results, how should we think of them in relation to other cases not covered by the assumptions we relied on?
In this course much more so than in others, it was a case of having to read and understand the lectures long after they were held. To a much larger degree than other courses I have taken. That could just have been me.
Project tasks could have stated their expectations a lot more clearly. For learning we would also prefer if we had feedback on project 1 before handing in project 2.
In general, project 3 was too long. Clarifying expectations would be one way to make it better without being shorter.

Have you during this course experienced course literature, staff or teaching methods to be discriminatory in any way (gender, ethnicity, etc.)?

Have you during this course experienced course literature, staff or teaching methods to be discriminatory in any way (gender, ethnicity, etc.)?
No.
